VersaPlanetary v1 vs VersaPlanetary v2

The VersaPlanetary v2 now assembles from the Input Housing towards the Output Housing. This allows the Output Housing to remain assembled in a mechanism while changed the ratio and motor.

Bosses have been added to the top and bottom to make the width 1.75" instead of 42mm.

There is a new optional pilot ring to pilot the VersaPlanetary v2 on a 3/4" hole (the same as CIM motors) to locate the gearbox.
